## IMPORTANT NOTICE

Dear Xcel Energy Customer,

Over the next three to five years, Xcel Energy is replacing nearly 100 linear miles of natural gas pipeline in the Denver metro area that will result in continued reliable gas service for current and new customers.

Xcel Energy has contracted with our company, InfraSource Underground Construction, to replace gas pipeline along East Quincy Street from South University Blvd to South Ivy Lane that may include work alongside and adjacent streets. Work is scheduled to start on Oct. 12, 2009, and we anticipate finishing on Dec. 15, 2009, though inclement weather may cause delays during the project.

Our permit from the city will not allow any lane closures between 8:00am-9:00 am and 3:00pm-4:00 pm Monday through Friday. Traffic control devices and "NO PARKING" signs will be placed on streets before work starts. Driveways may need to be blocked for short periods of time, and we apologize in advance for any inconvenience this may cause. By law, "NO PARKING" signs must be set out two working days before construction starts, and if vehicles are still parked in the no parking area 24 hours prior to construction, or they will be towed.

Temporary repairs will be made as the new pipe and service work is performed. However, as the new pipe system is tested to ensure it is operating correctly, construction crews may need to come back to do additional work and "No Parking" signs will reappear for this work and when permanent street and sidewalk repairs will be made after the new pipeline is operational.

Care will be taken to repair and/or replace any landscaping, concrete and/or asphalt that is disturbed during our work on your property. Because we are replacing an entire section of gas pipeline, we will make temporary repairs to streets and sidewalks until the new pipeline is pressure tested and all natural gas service is transferred from the old pipe. Then permanent sidewalk, street and other permanent repairs will be made.

As InfraSource's project coordinator I will be onsite most of the time during this project, but you can reach me or one of my colleagues 24 hours a day, seven days a week at 303-598-2088 to discuss any concerns or to ask any questions you may have about this project. Xcel Energy also is available at all times at 1-800-895-4999.

Thank you in advance for your cooperation and patience during this work.

Sincerely,  
Richard Wilkinson  
Project Superintendent  
InfraSource Underground Construction
